

# HOW TO DETERMINE AN OCCUPANCY HAZARD CLASSIFICATION?

**A.4.3.2**  
**Light hazard** occupancies include occupancies having uses and conditions similar to the following:

- (1) Animal shelters
- (2) Churches
- (3) Clubs
- (4) Eaves and overhangs, if of combustible construction with no combustibles beneath
- (5) Educational
- (6) Hospitals, including animal hospitals and veterinary facilities
- (7) Institutional
- (8) Kennels
- (9) Libraries, except large stack rooms
- (10) Museums
- (11) Nursing or convalescent homes
- (12) Offices, including data processing
- (13) Residential
- (14) Restaurant seating areas
- (15) Theaters and auditoriums, excluding stages and prosceniums
- (16) Unused attics

Note that it is not the committee's intent to automatically equate library bookshelves with ordinary hazard occupancies or with library stacks. Typical library bookshelves of approximately 8 ft (2.4 m) in height, containing books stored vertically on end, held in place in close association with each other, with aisles wider than 30 in. (760 mm) can be considered to be light hazard occupancies. Similarly, library stack areas, which are more akin to shelf storage or record storage, as defined in NFPA 232, should be considered to be ordinary hazard occupancies.

▲ 4.3.3.1

Ordinary hazard (Group 1) occupancies include occupancies having uses and conditions similar to the following:

- (1) Automobile showrooms
- (2) Bakeries
- (3) Beverage manufacturing
- (4) Canneries
- (5) Dairy products manufacturing and processing
- (6) Electronic plants
- (7) Glass and glass products manufacturing
- (8) Laundries
- (9) Restaurant service areas
- (10) Porticoches
- (11) Mechanical rooms

▲ 4.3.3.2

Ordinary hazard (Group 2) occupancies include occupancies having uses and conditions similar to the following:

- (1) Agricultural facilities
- (2) Automobile parking garages
- (3) Barns and stables

**NFSA** National Fire Sprinkler Association

MEMBERSHIP EVENTS REGIONS ABOUT LEARNING BLOG RESOURCES

**JOIN NFSA, SEARCH OUR EOD ARTICLES, AND GET EXPERT ANSWERS TO SPECIFIC NFSA SPRINKLER QUESTIONS—FAST**

**ASK AN EOD QUESTION HERE!**

NFSA members enjoy many benefits, and one of the most valuable resources is our **Expert of the Day (EOD)** service. Members submit their toughest real-world questions about sprinkler design, installation, inspection, testing, and maintenance (ITM), and more. Our fire NFSA question experts respond with accurate and accessible answers about code, standards, and technology. Contractors and Authorities Having Jurisdiction (AHJs) also use this resource to solve complex problems.

EOD questions are answered for members **within two business days**, but some of them can get expert answers even faster than that. In addition to submitting their questions, people can also search questions that have already been asked and answered. The EOD program helps NFSA members get the information they need to work safely.

In this article, we explain how to submit a question and who our EOD experts are. And we'll provide some examples of the issues we solve—including a recent request that started with a seemingly simple question but led to new language being submitted to a National Fire Protection Association (NFPA) standard.

NFSA offers the Expert of the Day program as a members-only service. To take advantage of EOD and other member benefits like discounted training, the National Fire Sprinkler Magazine, and more, [join NFSA](#) or [renew your membership](#).

**HOW TO SUBMIT A QUESTION TO NFSA'S EXPERT OF THE DAY**

Submitting a query is easy. NFSA members can [login to NFSA](#) and search "Expert of the Day." Either way, the Expert of the Day takes your question and starts researching the answer. They'll get in touch as soon as your answer is ready.

## WHAT'S THE PROCESS FOR DETERMINING AN OCCUPANCY HAZARD CLASSIFICATION?

- ① LOOK THROUGH PLANS
- ② MATCH HAZARD CATEGORY FOR EACH AREA
- ③ SET ASIDE STORAGE AREAS
- ④ CLARIFY VAGUE SPACES (IF NEEDED)
- ⑤ SEEK OUT ADDITIONAL SUPPORT (IF NEEDED)
